15. OLALLA CHAMBA JULIAN ALBERTO
16. OLIVO BENAVIDEZ NESTOR JOSE

PROJECT INSPECTION		
Artifacts	**Observations**	**Grade**
Definition	The document contains wording errors, does not clearly explain the operational problem, and includes inaccurate claims about spreadsheet capabilities.	9.7/10
List of Possible Objects	The list was not provided, so the requirement of at least ten well-defined objects could not be verified.	0/10
SRS IEEE 830	The introduction is incomplete because it lacks explicit subsections for product scope, references, and document overview.	9.9/10
UML Class Diagram	The diagram contains a spelling error in a class reference: "Custumer" should be "Customer." Class names should be consistent throughout the diagram.	9.9/10
UML use case diagrams	Use case names have inconsistent capitalization. A consistent naming style should be applied throughout the diagram.	9.9/10
Clean code	The code contains inconsistent field visibility, a variable name that	9.7/10
	loading existing records.	
Data reports: CSV	Only one CSV report type was identified. The economic status and customer frequency reports are displayed only in the console, so an additional CSV export is needed if two distinct report types are required.	9.9/10
Total		88.2/100
Execution of features	Recording a book purchase does not increase inventory stock. Additionally, invalid dates and out-of-range book selections cause unhandled exceptions that terminate the application. Stock updates and input validation need correction.	87/100
