C:\Program Files\WindowsAp
Welcome to the Python installation manager configuration helper.
Your app execution alias settings are configured to launch other commands besides 'py' and 'python'.
This can be fixed by opening the 'Manage app execution aliases' settings page and enabling each item labelled 'Python (default)' and 'Python install manager'.
If the items are already enabled, you may need to disable and re-enable them.
Open Settings now, so you can modify App execution aliases? [y/N] Y
The Settings app should be open. Navigate to the App execution aliases page and scroll to the 'Python' entries to enable the new commands.
The global shortcuts directory is not configured.
Configuring this enables commands like python3.14.exe to run from your terminal, but is not needed for the python or py commands (for example, py -V:3.14).
We can add the directory (C:\Users\LABS-ESPE\AppData\Local\Python\bin) to PATH now, but you will need to restart your terminal to use it. The entry will be removed if you run py uninstall --purge, or else you can remove it manually when uninstalling Python.
Add commands directory to your PATH now? [y/N]

Add commands directory to your PATH now? [y/N] Y
PATH has been updated, and will take effect after opening a new terminal.
You do not have the latest Python runtime.
Install the current latest version of CPython? If not, you can use 'py install default' later to install.
Install CPython now? [Y/n] Y
Python install manager was successfully updated to 26.3.
Additional shebang configuration is now available. Please see https://docs.python.org/using/windows#shebang-lines for more information.
The signature for https://www.python.org/ftp/python/index-windows.json was successfully verified.
Installing Python 3.14.8.

C:\Program Files\WindowsAp
To run these checks again, launch Python install manager from your Start menu, or py install --configure from the terminal.
Usage:
py <regular Python options>
Launch the default runtime with specified options. This is the equivalent of the python command.
py -V:<TAG>
Launch runtime identified by <TAG>, which should include the company name if not PythonCore. Regular Python options may follow this option.
py -3<VERSION>
Equivalent to -V:PythonCore\3<VERSION>. The version must begin with the digit 3, platform overrides are permitted, and regular Python options may follow. py -3 is the equivalent of the python3 command.
py exec <any of the above>
Equivalent to any of the above launch options, and the requested runtime will be installed if needed.
py help [<CMD>]
Show help for Python installation manager commands
py install <TAG>
Download new Python runtimes, or pass --update to update existing installs.
py list [<FILTER>]
Show installed Python runtimes, optionally filtering by <FILTER>.
py uninstall <TAG>
Remove one or more runtimes from your machine. Pass --purge to clean up all runtimes and cached files.
Find additional information at https://docs.python.org/using/windows.
