Date: 02/10/2026

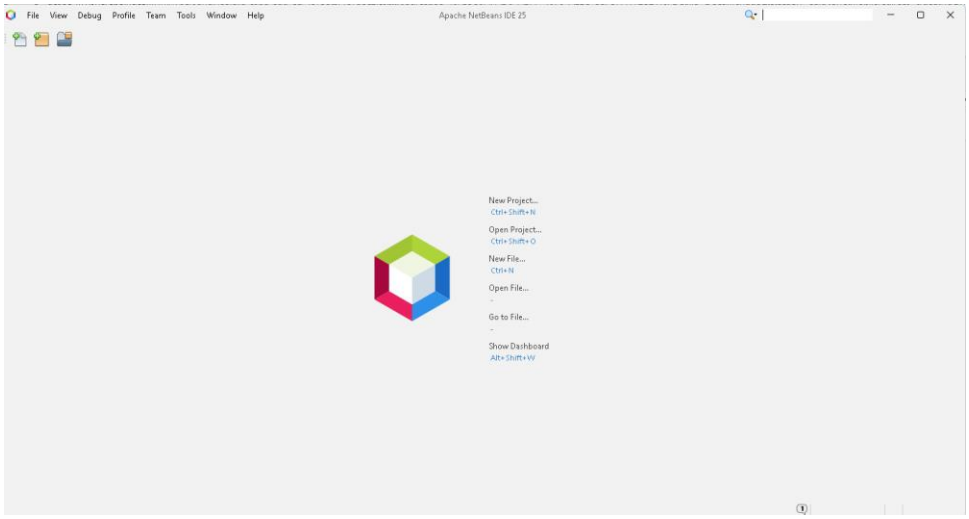

1. Installing Git CLI

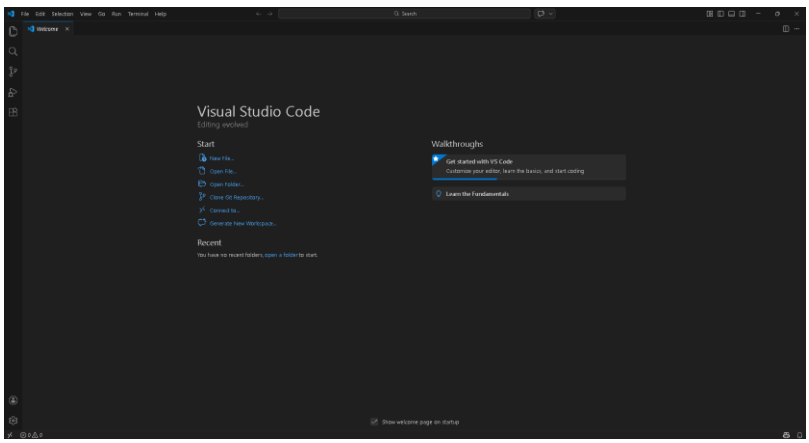

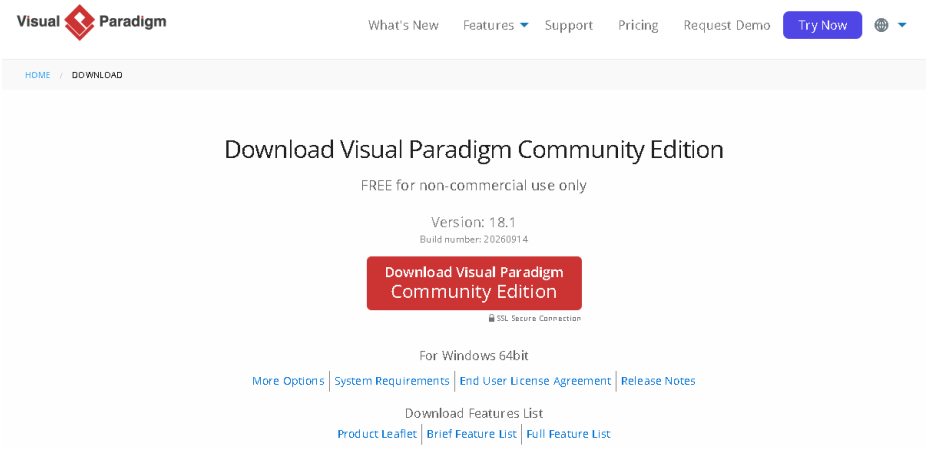

2. Apache NetBeans (Already installed)

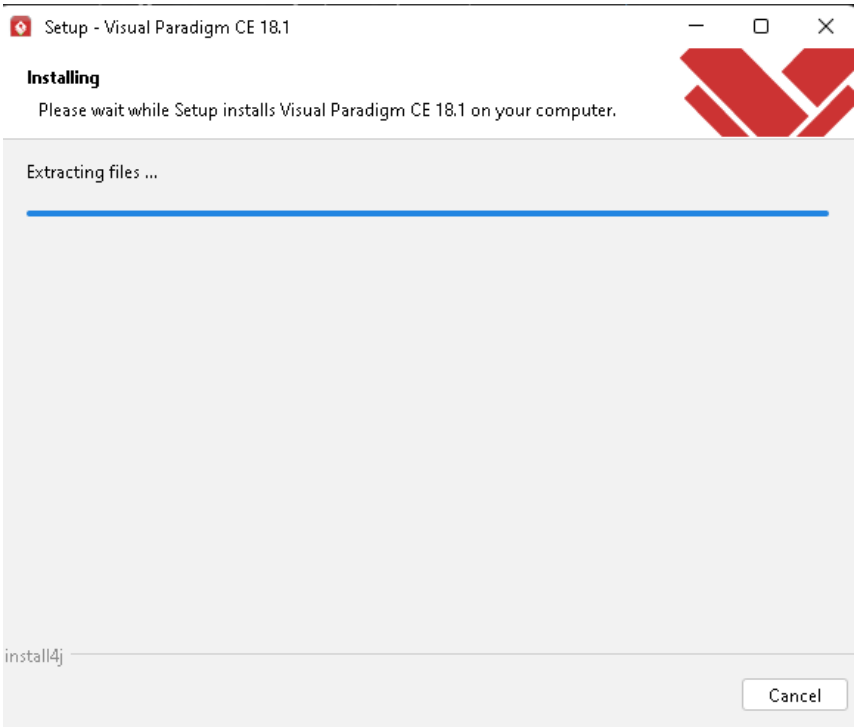

3. Visual Studio Code (Already installed)

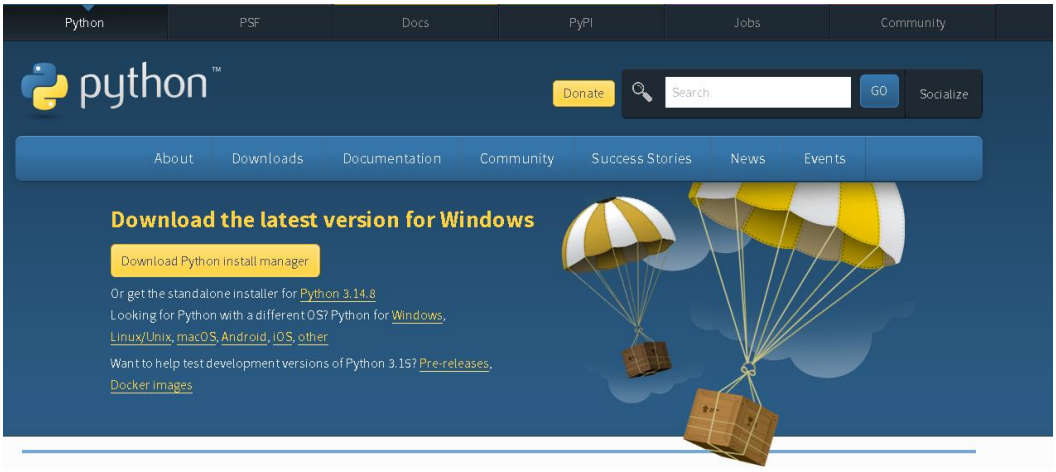

4. Installing Visual Paradigm

5. Installing Python

```
Python installation manager 26.3
Copyright (c) Python Software Foundation. All Rights Reserved.

Usage:
    pymanager exec <regular Python options>
                                Launch the default runtime with specified
                                options, installing it if needed. This is the
                                equivalent of the python command, but with
                                auto-install.
    pymanager exec -V:<TAG>     Launch runtime identified by <TAG>, which
                                should include the company name if not
                                PythonCore. Regular Python options may follow
                                this option. The runtime will be installed if
                                needed.
    pymanager exec -3<VERSION>  Equivalent to -V:PythonCore\3<VERSION>. The
                                version must begin with a '3', platform
                                overrides are permitted, and regular Python
                                options may follow. The runtime will be
                                installed if needed.
    pymanager help [<CMD>]      Show help for Python installation manager
                                commands
    pymanager install <TAG>     Download new Python runtimes, or pass --update
                                to update existing installs.
    pymanager list [<FILTER>]   Show installed Python runtimes, optionally
                                filtering by <FILTER>.
    pymanager uninstall <TAG>   Remove one or more runtimes from your machine.
                                Pass --purge to clean up all runtimes and
                                cached files.

Find additional information at https://docs.python.org/using/windows.
```

6. Node.js (Already installed)

```
Welcome to Node.js v24.13.1.
Type ".help" for more information.
> .help
.break    Sometimes you get stuck, this gets you out
.clear    Alias for .break
.editor   Enter editor mode
.exit     Exit the REPL
.help     Print this help message
.load     Load JS from a file into the REPL session
.save     Save all evaluated commands in this REPL session to a file

Press Ctrl+C to abort current expression, Ctrl+D to exit the REPL
```
