LASCANO, JORGE EDISON

October 22, 2026

9	**Last Name:** García Galarza	**First Name:** Jesús Alejandro	**Grade:**

OOP Concepts: Encapsulation, Abstraction, inheritance, Polymorphism

Objects and Classification

Encapsulation: Classes, package, libraries, private
Abstraction: Abstract methods, think in what really matters for my app
Inheritance: Taking advantage of what is already done by other: Object
Polymorphism: Use the same for different but related activities

Constructors → Used to initialize / instantiate object for a class

UML Diagram

Classes: Atributes and method's / Use Case Diagrams: The functionality

Classes relationships:

Dependencies: The function of one class uses objects of another class, either as parameters or as return data types, or inside the function
Associations: One object of a class contains or has an attribute of another class
Aggregations: Every objects exists by itself
Compositions: The life of the composed objects
